Kelas : A

Buatkan kode yang menjalankan perkalian matrix untuk array 3 dimensi

KODE PROGRAM

```
import numpy as np

print("=====================================")
print("   PERKALIAN MATRIKS ARRAY 3 DIMENSI")
print("=====================================")

# Matriks A 3 dimensi
A = np.array([
    [[1, 2],
     [3, 4]],

    [[5, 6],
     [7, 8]]
])

# Matriks B 3 dimensi
B = np.array([
    [[2, 1],
     [1, 2]],

    [[3, 2],
     [2, 3]]
])

# Menampilkan matriks A
print("\nMatriks A:")
print(A)

# Menampilkan matriks B
print("\nMatriks B:")
print(B)

# Perkalian matriks
C = np.matmul(A, B)

# Menampilkan hasil
print("\nHasil Perkalian A x B:")
print(C)
```

```
print("\n=======================================")
print("           PROGRAM SELESAI")
print("=======================================")
```

OUTPUT
